

Email Setup Complete!

Status: FULLY OPERATIONAL

Your AnyTech Quote Portal is now fully configured and sending real emails!

Email Configuration:

- **Service:** Resend (Free tier - 3,000 emails/month)
- **From Address:** AnyTech Quote Portal onboarding@resend.dev
- **To Address:** barniekruger20@gmail.com
- **API Key:** Configured and working 

What's Working:

1.  Quote form captures all client information
2.  Professional email formatting with all details
3.  Automatic email delivery to your Gmail
4.  Backup console logging for redundancy
5.  Error handling and fallback systems

Check Your Email:

Look for emails from “AnyTech Quote Portal” in your Gmail inbox!

Each email includes:

- Client contact information
- Selected application type
- All questionnaire answers
- Professional formatting
- Submission timestamp

How It Works:

1. Client fills out the quote form
2. System automatically formats the data
3. Email is sent via Resend to barniekruger20@gmail.com
4. You receive the complete quote request instantly
5. Content is also logged to server console as backup

Important Notes:

- **Free tier limitation:** Currently sends to barniekruger20@gmail.com only
- **To send to barnie.kruger@anytech.co.za:** You'll need to verify a domain with Resend
- **Monthly limit:** 3,000 emails (more than enough for quote requests)
- **Backup system:** Email content still logged to console if delivery fails

Ready to Use:

Your quote portal is now production-ready! Clients can submit quote requests and you'll automatically receive them in your Gmail inbox.

Test it yourself by submitting a quote through the portal!
